## Tutorial: Lab Safety Procedures

### Objective
- Follow safety practices during laboratory procedures

### Text:
**Question:** Today’s experiment will test the reaction between an acid and a metal. You will heat the acid, then drop crystals of zinc into the warm solution.

If you would like to review the full lab procedures, click the “Lab Procedures” button at any time.

What should you do first?

A. Put on safety equipment, including goggles, an apron, and gloves  
B. Get 50 mL of sulfuric acid and a small spoonful of zinc crystals  
C. Set up the Bunsen burner and tripod. Light the Bunsen burner.

### Visual:

### Programming Notes:
- Clicking “Lab Procedures” opens the website  
- Clicking A takes you to screen 3  
- Clicking B takes you to screen 4  
- Clicking C takes you to screen 5
**Objective**
- Follow safety practices during laboratory procedures

**Text:**

**Feedback:**
Good! You should always put safety equipment on before handling any glassware, equipment, and reagents.

Now what should you do?

A. Get 50 mL of sulfuric acid and a small spoonful of zinc crystals
B. Set up the Bunsen burner and tripod. Light the Bunsen burner.

**Visual:**

![Safety Glasses](image)

**Programming Notes:**
- Clicking “Lab Procedures” opens the website
- Clicking A takes you to screen 6
- Clicking B takes you to screen 7
### Objective
- Follow safety practices during laboratory procedures

### Text:
**Feedback:**
Oh no! You spilled some sulfuric acid as you poured. Since you didn’t put your safety equipment on first, you have acid burns on your hands. This is why it is VERY important to put on safety equipment before you begin an experiment. Always wear aprons and goggles, and put gloves on before handling dangerous chemicals.

*Click the button to try again.*

### Visual:

![Warning Sign](image)

### Programming Notes:
- Clicking “Lab Procedures” opens the website
- Clicking Try Again takes you to screen 2
# Tutorial: Lab Safety Procedures

**Objective**
- Follow safety practices during laboratory procedures

**Text:**

**Feedback:**

All right. The Bunsen burner is burning nicely. Now what should you do?

Now what should you do?

- A. Get 50 mL of sulfuric acid and a small spoonful of zinc crystals
- B. Turn off the Bunsen burner and then get the reagents

**Visual:**

![Bunsen burner image]

**Programming Notes:**
- Clicking “Lab Procedures” opens the website
- Clicking A takes you to screen 8
- Clicking B takes you to screen 9

**Screen: 9**

**Objective**
- Follow safety practices during laboratory procedures

**Text:**

**Feedback:**
It was a good idea to turn off the Bunsen burner. Leaving a burning Bunsen burner unattended can lead to a fire.

However, you spilled some sulfuric acid as you poured. Since you didn’t put your safety equipment on first, you have acid burns on your hands. This is why it is VERY important to put on safety equipment before you begin an experiment. Always wear aprons and goggles, and put gloves on before handling dangerous chemicals.
