COURSE INFORMATION

PHYS 670: Electromagnetic Theory I

Course Blackboard Learn website available @ webcourses.niu.edu!

General Information

Location: LT 227 (conference room)
Time: Spring Semester of 2015, Tuesdays and Thursdays, 3:30 – 4:45 pm
Instructor: Dr. Bela Erdelyi
  E-mail: berdelyi@niu.edu
  Phone: (815) 753-6484
  Office hours: (well) before classes, 11:00am - 1:00pm in LT 225

Duration: 15 weeks, i.e. 30 lectures + Final
Exams: 1 midterm, during regular class – March 5, 2013
  Final: comprehensive, emphasizing second part – May 5, 2015 @ 4:00pm in LT 227
Sources for Exams: the exams will be closed book/electronics. You may bring up to 4 pages (2 sheets, 4 sides) of helping material with you to the exams.
Grading: 40% homework + 25% midterm + 35% final
Letter Grades: an aggregate numerical value of at least 50% of the total points is required to pass the course with a C, with no component (homework, midterm, final) worse than 25%. The cutoff for an A grade will be approximately 85%, and lower grade level cutoffs every 5-10% (A-: 80%, B+: 75%, B: 70%, B-: 65%, C+: 60%, C: 50%, C-: 40%, D: 25%)
Homework Assignments: 6 sets, with clearly defined due dates/times. Late turn in of homework permissible only under unusual circumstances that are documented.
Course Expectations: read assigned material before lectures, attend the lectures, participate in discussions, read the appropriate sections of the textbook again after lectures, complete and turn in homework in a timely manner, solve as many problems as you can, take the exams. Expect to spend 6-9 hours per week outside classes on this course. You are encouraged to set up study groups, work together on problems, but the solutions turned in must be your own. Cite any material you used from publications, the web, etc. Homework turned in should be professional, clearly legible, showing all work, steps involved, derivations, etc. It is recommended to type up all homework solutions in LateX, Word, or Mathematica, etc.

Course Description

This course aims at providing a rigorous foundation for advanced classical electrodynamics and some of its applications. Particular focus is given to time-dependent phenomena stemming from the axiomatic definition of electrodynamics based on the microscopic Maxwell equations,
and their consequences in vacuum and matter; and for source distributions and their associated fields and waves.

**Prerequisites:** previous course(s) on electricity and magnetism at the level of D.J. Griffiths, Introduction to Electrodynamics, 3rd edition, Prentice-Hall, 1999

**Required textbook:** J.D. Jackson, Classical Electrodynamics, 3rd edition, Wiley, 1999, ISBN 0-471-30932-X. We will develop selected topics from Chapters 6-10, with a, hopefully, slightly more modern perspective.

**Optional Readings.** For a deeper understanding, you may also want to consult these:
- J. Franklin, Classical Electromagnetism
- W. Panofsky and M. Philips, Classical Electricity and Magnetism

**Syllabus**

**Chapter 1. Mathematics of Electrodynamics**
- Lecture 1. Scalar, Vector and Tensor Fields, Vector Analysis, and Integral Identities
- Lecture 2. Special Functions, Complex Notation, and Fourier Transforms

**Chapter 2. (Jackson Chapter 6)**
- Lecture 3. Introduction to the course and a brief review of electricity and magnetism.
- Lecture 5. Green functions and retarded solutions for the fields.
- Lecture 8. Transformation properties of electromagnetic fields and sources.

**Chapter 3. (Jackson Chapter 7)**
- Lecture 11. Reflection and refraction.

**Midterm.**
- Lecture 15. Problem solving session
- Lecture 16. Exam
- Lecture 17. In-class exam solutions

**Chapter 4. (Jackson Chapter 8)**
- Lecture 18. Introduction to waveguides and cavities, fields on/in conductors.
Lecture 19. Waveguides and their modes; energy flow and attenuation.
Lecture 21. Power losses, cavity Q.
Lecture 22. Normal mode expansions.

Chapter 5. (Jackson Chapter 9)
Lecture 23. Fields and radiation of localized sources, dipole radiation.
Lecture 25. Multipole expansions for electromagnetic fields and their properties.
Lecture 26. Sources of multipole radiation; multipole moments.

Chapter 6. (Jackson Chapter 10)
Lecture 27. Scattering at long wavelengths.
Lecture 28. Scattering at medium and short wavelengths.

Course Review
Lecture 29. Fun with E&M.
Lecture 30. Review for Final; Q&A.

Accessibility Statement

Northern Illinois University is committed to providing an accessible educational environment in collaboration with the Disability Resource Center (DRC). Any student requiring an academic accommodation due to a disability should let his or her faculty member know as soon as possible. Students who need academic accommodations based on the impact of a disability will be encouraged to contact the DRC if they have not done so already. The DRC is located on the 4th floor of the Health Services Building, and can be reached at 815-753-1303 (V) or drc@niu.edu.
