DIY Worm Bin

An inexpensive way to use your food waste to feed worms and in turn they will provide nutrient rich compost for gardens or indoor plants!

Materials Needed:

- Two plastic containers with lids
- Paper: newspaper, junk mail, old bills, non-glossy
- Food scraps and organic material
- Worms: Red wigglers

Steps to prepare bin:

1. Place in food scraps!
   a. Place food scraps on top of the soil
   b. Food scraps should be placed under a layer of damp paper scraps
   c. Food scraps include: cores, peels, egg shells

2. Add in your worms!
   a. Let your bin sit in sunlight for a little to allow the worms to burrow

3. Add about 3-4 cups of soil over your shredded paper

4. Place half shredded and half dry shredded paper into your container
   a. Container should be about 1/3 filled

5. Shred or tear paper pieces and soak pieces in a small water bowl.
   a. Paper should be damp not dripping

6. Create holes at the top and bottom of your bin including the top lid
