General Information

Location: FR 205
Time: Spring Semester of 2017, Mondays and Wednesdays, 2:00 – 3:15 pm
Instructor: Dr. Bela Erdelyi
   E-mail: berdelyi@niu.edu
   Phone: (815) 753-6484
   Office hours: after Monday class, 3:15 – 5:00pm in LT 225; or contact me by email; or set up an appointment

Duration: 15 weeks, i.e. 27 lectures + Midterm + Final
Credits: 3
Contact hours: 2.5
Laboratory: n/a;
Exams: • 1 midterm, during regular class – March 20, 2016
       • 1 final: comprehensive, emphasizing 2nd part – May 08, 2016 @ 2:00 – 3:50 pm in FR 205

Sources for Exams: the exams will be closed book/electronics. You may bring up to 4 pages (2 sheets, 4 sides) of helping material with you to the exams.
Grading: 40% homework + 25% midterm + 35% final
Letter Grades: an aggregate numerical value of at least 50% of the total points is required to pass the course with a C, with no component (homework, midterm, final) worse than 25%. The cutoff for an A grade will be approximately 85%, and lower grade level cutoffs every 5-10% (A-: 80%, B+: 75%, B: 70%, B-: 65%, C+: 60%, C: 50%, C-: 40%, D: 25%)

Homework Assignments: 6 sets (one set after each chapter), with clearly defined due dates/times. Late turn in of homework permissible only under unusual circumstances.
Course Expectations: read assigned material before lectures, attend the lectures, participate in discussions, read the appropriate sections of the textbook again after lectures, complete and turn in homework in a timely manner, solve as many problems as you can, take the exams. Expect to spend 6-9 hours per week outside classes on this course. You are encouraged to set up study groups, work together on problems, but the solutions turned in must be your own. Cite any material you used from publications, the web, etc. Homework turned in should be professional, clearly legible, showing all work, steps involved, derivations, etc. It is recommended to type up all homework solutions in Latex, Word, or Mathematica, etc.
Course Description

This course aims at providing a rigorous foundation for advanced classical electrodynamics and some of its applications. Particular focus is given to time-dependent phenomena stemming from the axiomatic definition of electrodynamics based on the microscopic Maxwell equations, and their consequences in vacuum and matter; and for source distributions and their associated fields and waves.

At the end of the course, students will understand charged particle and electromagnetic fields dynamics, interactions, physical phenomena arising in applications, and their mathematical treatment; and will have developed skills in problem solving utilizing, analyzing, and synthetizing these concepts.

Catalog description: Maxwell’s equation, plane waves in isotropic and anisotropic dielectrics, conducting media, wave guides and plasmas, dipole radiation and diffraction.

Prerequisites: PHYS 570

Optional Readings. For a deeper understanding, you may also want to consult these:

- J. Franklin, Classical Electromagnetism
- W. Panofsky and M. Philips, Classical Electricity and Magnetism

Syllabus

Chapter 1. Mathematics of Electrodynamics

- Lecture 1. Scalar, Vector and Tensor Fields, Vector Analysis, and Integral Identities
- Lecture 2. Special Functions, Complex Notation, and Fourier Transforms

Chapter 2. (Jackson Chapter 6)

- Lecture 3. Introduction to the course and a brief review of electricity and magnetism.
- Lecture 5. Green functions and retarded solutions for the fields.
- Lecture 8. Transformation properties of electromagnetic fields and sources.

Chapter 3. (Jackson Chapter 7)

- Lecture 11. Reflection and refraction.
Lecture 13. Superposition of waves, group velocity, and pulse spreading.

Midterm.
Lecture 15. Problem solving session
Lecture 16. Exam
Lecture 17. In-class exam solutions

Chapter 4. (Jackson Chapter 8)
Lecture 18. Introduction to waveguides and cavities, fields on/in conductors.
Lecture 19. Waveguides and their modes; energy flow and attenuation.

Chapter 5. (Jackson Chapter 9)
Lecture 23. Multipole expansions for localized sources.
Lecture 25. Sources of multipole radiation; multipole moments.

Chapter 6. (Jackson Chapter 10)
Lecture 27. Scattering at medium and short wavelengths.

Course Review
Lecture 28. Fun with E&M.
Lecture 29. Review for Final; Q&A.

Accessibility Statement

Northern Illinois University is committed to providing an accessible educational environment in collaboration with the Disability Resource Center (DRC). Any student requiring an academic accommodation due to a disability should let his or her faculty member know as soon as possible. Students who need academic accommodations based on the impact of a disability will be encouraged to contact the DRC if they have not done so already. The DRC is located on the 4th floor of the Health Services Building, and can be reached at 815-753-1303 (V) or drc@niu.edu.
